

Introductory note for parents and carers

Welcome to Primary Ethics Bites! This **Bite** takes around 15 minutes to complete, but you may find the ideas within are revisited in conversations around the dinner table for weeks to come.

This **Bite** is available in both audio and printed (PDF) formats. The same content is covered in each, so simply choose the option that best suits your student's learning environment. There's no need to read along or use the PDF as a worksheet if you choose to use the audio.

If an adult is not available to assist, we recommend downloading the audio version as the stories and questions are read to the student for them. It's best if the recording can be paused during the 'thinking time' to allow the child to work through the questions at their own pace.

Bites for the 3 – 6 age group are designed for students to tackle individually, with one or more siblings or peers. An adult may like to participate by helping to read the stories and questions, by modelling genuine curiosity and supporting the student to think for themselves.

Aim to be neutral when listening to the ideas expressed by your student and ask them to give the reasons behind their opinion rather than try to do the thinking and reasoning for them. Encourage the student to talk through their ideas by using expressions like 'Okay', 'Hmmm, I wonder...' and 'that's an interesting thought!'

There is often not a single right answer when it comes to ethical dilemmas. In that way, ethics is different to other lessons like maths. Instead, what ethical inquiry helps us do is to look at a situation or idea from different points of view, and to think about the reasons *behind* those points of view. When we do this, we think more deeply about our own views, discover new ideas, and build a deeper understanding of the considerations in each dilemma. We develop our skills in critical thinking and ethical reasoning and our ability to make well-thought-out decisions in a range of circumstances.

Who should get the garden?

Objectives/ethical concepts explored

- The importance of taking all interests into account when deciding what should be done about a question.
- The way 'ordinary' people can contribute to the conservation of the environment.

Skills developed

- Listening and recalling
- Identifying criteria to assist in decision-making
- Reasoning
- Evaluating

Essential questions

- What would the consequences be if Kai's family sell their garden to the developer?
- Has Kai's family been selfish keeping the big block of land all to themselves?
- What is more important; that animals have their basic needs met or that people get to live where they want
- Is it important that the developer can earn a living?

In this topic we encourage students to think about how to balance the conflicting interests of animals and people.

Bites are based on Primary Ethics lessons developed for use by trained adult volunteer facilitators in NSW public schools. Our lessons are based on philosophical ethics and use a 'community of inquiry' approach – the *asking power* of the group – to work together in discussion. The community of inquiry approach provides students with the opportunity to reflect on and form their own responses and consider the ideas of others in a safe and supportive environment.

You can read more about the community of inquiry approach here: <https://primaryethics.com.au/about-ethics-classes/what-happens-in-an-ethics-class/>

And watch this video for a great explanation of philosophical ethics: <https://vimeo.com/199903>
